

Jožef Stefan Institute, Ljubljana, Slovenia
Department of Systems and Control

Department of Industrial Automation
University of Chemical Technology and Metallurgy
Sofia, Bulgaria

Congratulatory Address

Congratulations on the 40th anniversary of the Department of Industrial Automation, part of the Faculty of Chemical and Systems Engineering at the University of Chemical Technology and Metallurgy in my name as well as on behalf of my colleagues from Department of Systems and Control at Jožef Stefan Institute in Ljubljana and on behalf of my colleagues from School of Engineering and Management at University of Nova Gorica in Nova Gorica.

Your department is known by reach history of educational and research activities. The department's personnel consist of active educators on all three levels of university education and have an impressive record of about 1500 graduates. The research achievements in the field of process control, system theory and practice as well as information technologies are much more than just a support of your educational activities. Your record of international research project shows your international activities and links with research groups worldwide, which keeps you at the high level of developments in the field.

I am sure that the future of the department is most promising, accompanied by great success, and of utmost value to both the department faculty and your international partners. It is my great pleasure that you are partners in research and educational activities to both institutions which I am involved with and I look forward to joint activities in the future.

Good luck in your efforts in the future!

Prof. Dr. Juš Kocijan
Senior researcher at Jozef Stefan Institute
Ljubljana, Slovenia
Professor of Electrical Engineering at University of Nova Gorica
Nova Gorica, Slovenia
